EDUCATION

Ph.D., Mechanical Engineering, University of California, Berkeley **Sept. 2019 - present**
Designated Emphasis: Computational Data Science and Engineering
Advisor/Group: Tarek Zohdi/Multiphysics Simulation and Optimization Lab.
Dissertation Title: Dynamic optimization of direct-ink-write additive manufacturing

B.S., Chemical Engineering, Brigham Young University **April 2017**

RESEARCH INTERESTS

My research interests lie in numerical optimization for multiphysics problems allowing for generous flexibility in application. My current PhD and research interests reside in dynamic optimization for non-Newtonian flow, however I enjoy applying optimization principles to any other field.

EXPERIENCE

Graduate Student Instructor, UC Berkeley **Jan 2021–Present**

- MEC ENG C201 / MAT SCI 286 Modeling and Simulation of Advanced Manufacturing Processes - Tarek Zohdi
- E 238E Robust Optimization and Applications - Laurent El Ghaoui
- ENGIN 150 Modeling and Simulation Tools for Industrial Research Applications - Tarek Zohdi

Staff Scientist/Engineer, Lawrence Livermore National Laboratory **June 2017–Present**
In addition to my graduate studies, my work at LLNL is primarily focused on the practical and numerical optimization of non-Newtonian flow for 3D printing. On the practical front, this includes chemical formulation, mechanical construction and software development. Numerically this includes multiphysics modeling and simulation, as well as global optimization over solution domains for the most efficient input parameters. The direction of these interconnected areas is intelligent feedback control for 3D printing.

Research Assistant, Zucrow Propulsion Lab, Purdue University **Spring 2016 - Fall 2016**
During this summer, I oversaw a project of modifying propellant sensitivity by utilizing the piezo-electric effect. The materials I developed exhibited initiation properties that could be modified under varying electric fields. Subsequent testing to determine the underlying mechanisms allowed me to construct a device to control initiation sensitive based on the direction of the electric field.

Research Assistant, Placental Signaling Lab, Brigham Young University **Fall 2013 - Fall 2015**
During my first years as an undergraduate, I worked on identifying specific proteins associated with pregnancy complications and lung disease. This included drug testing and organ harvesting from genetically-controlled rats, tissue preparation, immunoprecipitation, western blotting, RNA isolation, cDNA production, and polymerase chain reaction testing.
